

1-DAY CONFERENCE ON PIPELINE CORROSION MANAGEMENT

THEME: PIPELINE CORROSION AND THEIR MITIGATIONS

27th September 2017 (Wednesday)
Crystal Ballroom, Corus Hotel, Kuala Lumpur
8.30 am - 5.00 pm

How can appropriate consideration of corrosion and integrity be most effectively balanced against capital cost for future pipelines?

How can industry better manage its pipelines to extend service lives without compromising safety?

How can we assess and manage ageing pipeline networks?

Pipeline plays an essential role in the transfer of bulk liquid product. Without these global network pipelines key industries such as the offshore oil and gas sector will no longer be viable. South East Asia is highly dependent on its extensive network of pipelines (e.g. it is estimated that there are 8,766 km of gas transmission and distribution pipelines in the region) to supply the energy needs of its people and support its growing economies. The severe financial pressures in recent years coupled with the high capital costs associated with the new pipelines have placed considerable pressure on the industry to make better use of existing asset and to extend their operational lives. The average annual corrosion-related cost to the pipeline transmission industry has been estimated at US\$ 7.0 billion. Corrosion consideration play a key role in determining the initial cost of a given pipeline as well as having a large impact on operating costs and life extension considerations.

The technical knowledge base alone will be insufficient to address the pipeline related corrosion challenges within the current environment. Innovation across multiple disciplines combined with the building of sustainable partnerships between operators, service companies, vendors, contractors and academia are essential. This one day conference will focus on addressing the corrosion based issues associated with pipeline corrosion with a view to address these questions and fostering future partnerships.

Who should attend?

- Managers, Engineers and Executive responsible for corrosion control, risk management or asset integrity
- Service providers, equipment suppliers, consultants and manufacturers to pipeline and oil & gas companies with strong knowledge of existing best practise or details of new solutions to share
- Operators with field experience and details of the problems being faced within their own pipeline networks and future requirements
- Academics with insights into new technologies and ideas on how to address these challenges
