Corrosion has been a rising challenge to the power, energy and oil & gas industries, ranging from new facilities operating in harsher corrosive environment, to maintaining ageing assets to safely operate beyond their original designed lives. A holistic and proactive corrosion management is therefore essential in dealing with this issue as there is no one-size-fits-all recipe in managing the corrosion and assets integrity. The current knowledge base alone will not be sufficient to address the ever-changing challenges in current times. Innovative approach and emerging digital technology are steadily reshaping the practice models among the corrosion fraternities.

Hence, this one-day conference, with the theme *"Holistic Corrosion Prevention and Management"*, aims to explore the various latest technologies, research, digitalization, data analytics, best practices, and innovative solutions that can translate effective corrosion control practices into broader organizations.

Who should attend?

Technicians, Engineers, Managers, Academicians, Data Scientists, Sales & Technical Service Personnel, Students, HSE Personnel, Purchasing Personnel, and IMM Certified Professionals in the following fields:

- Oil, Gas, Energy and Utilities
- Chemical & Petrochemical
- Data Sciences, Machine Learning
